

KnowledgeBridge / Business knowledge workflow

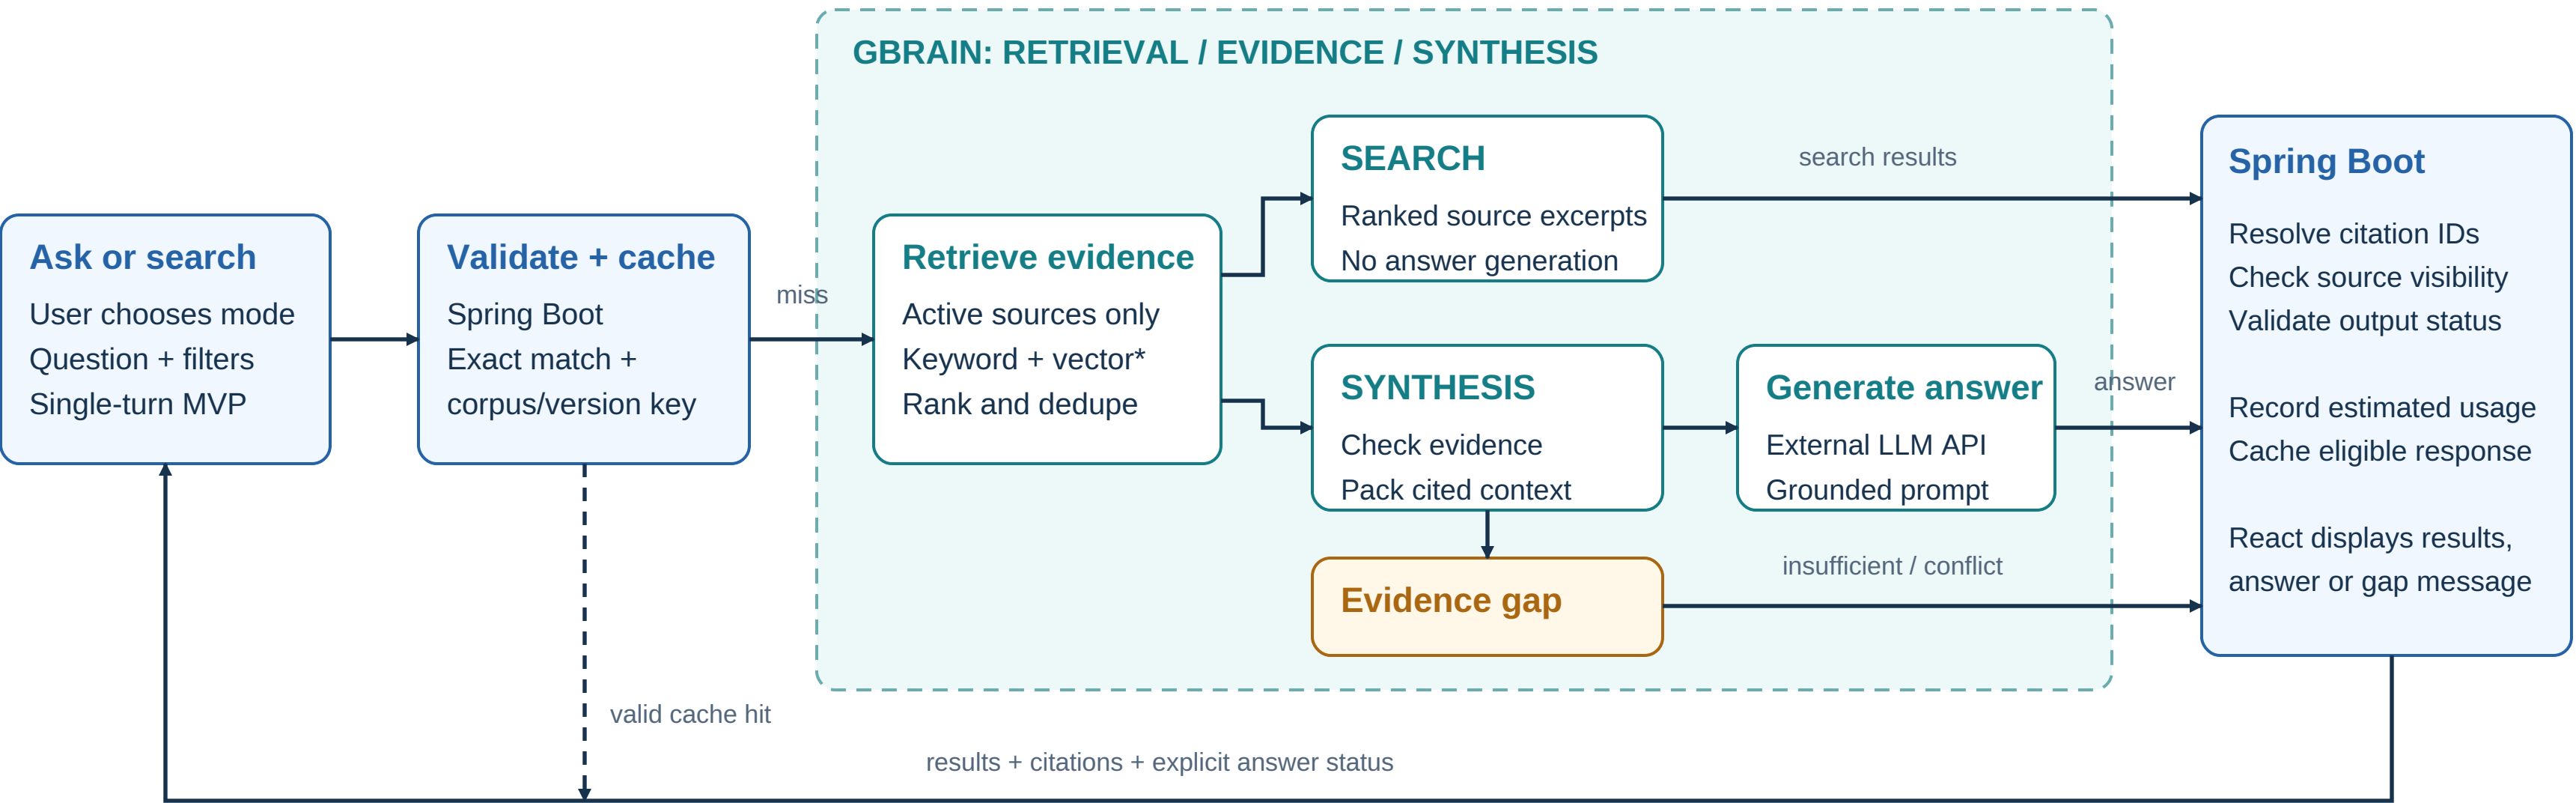

Milestone 1 | Proposed end-to-end behavior, not a claim of completed integration | 2026-09-26

01 INGEST, INDEX AND PUBLISH

On failure: retain the job and diagnostic status; no partially indexed source is treated as ready. Retry safely without duplicate versions.

02 RETRIEVE, ROUTE AND RESPOND

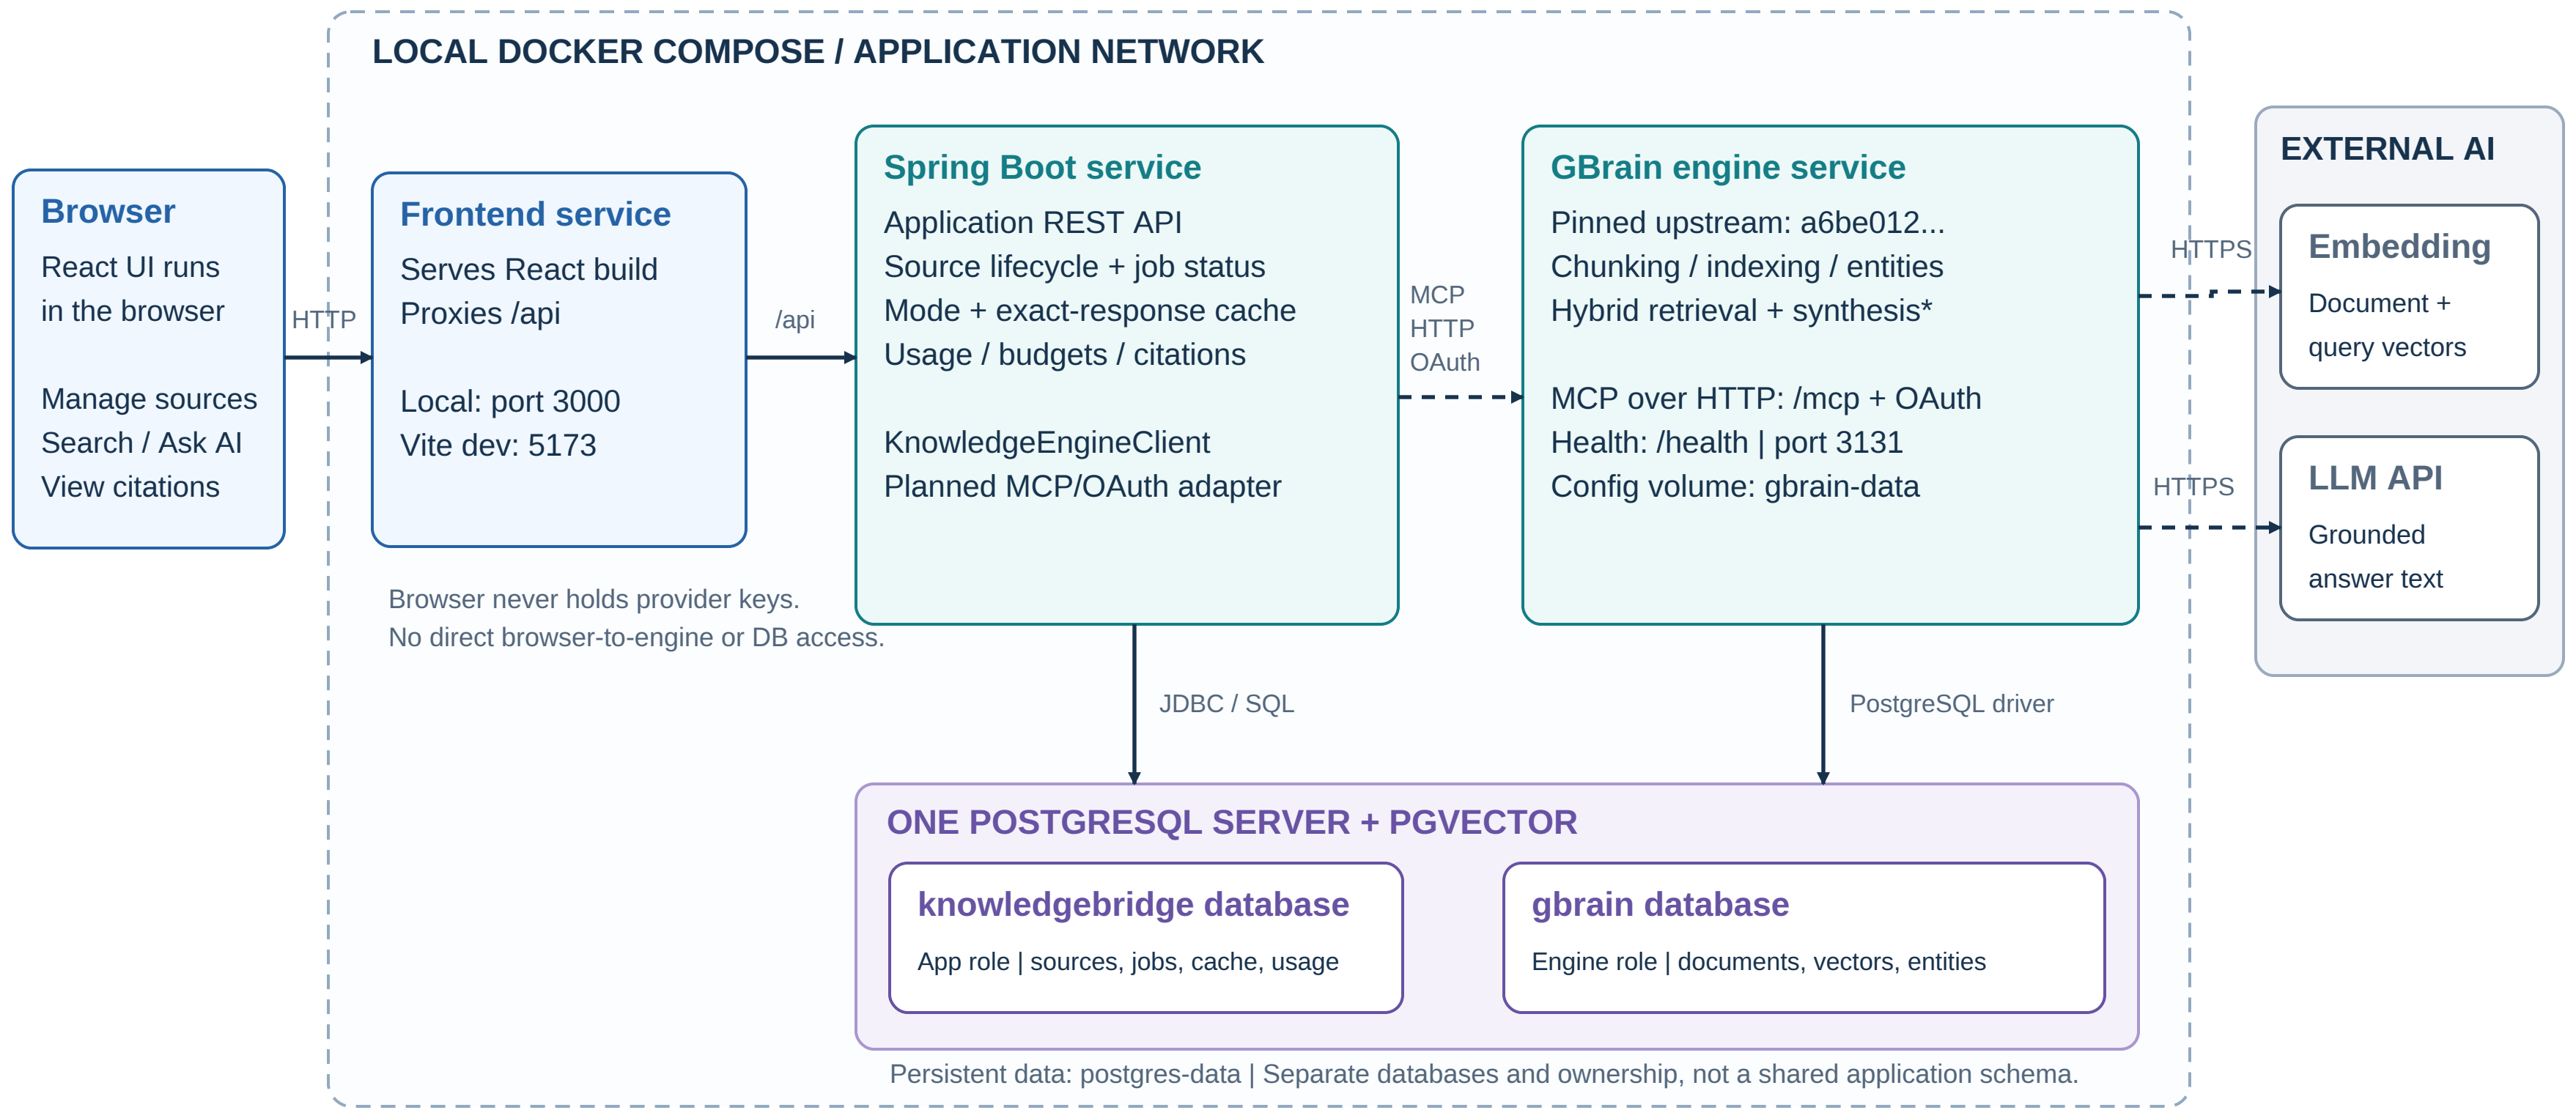

SOURCE LIFECYCLE: edit / supersede / soft-delete / purge -> engine update -> invalidate cached answers -> verify source visibility.

*Enable and validate semantic search and entity behavior on the pinned engine before presenting them as working capabilities.
Search has no synthesis charge, but semantic retrieval can incur query-embedding charges. Citation clicks open an application-controlled source view.
Engine boundary: supported MCP over HTTP/OAuth through the backend adapter. Pending -> processing -> completed | failed are application states.

KnowledgeBridge / System architecture

Milestone 1 | Design v0.1 | Repository-documented baseline + proposed integration | 2026-09-26

IMPLEMENTATION GATE

Dashed arrows = planned integrations, not currently working features. Bootstrap uses --no-embedding; provider setup and Java adapter remain open. Use the supported MCP/OAuth interface; do not invent REST ingestion/query endpoints or modify engine internals. *Engine behavior must be validated. Current local HTTP is not a public deployment design. Add TLS and approved access controls before shared or non-synthetic use.
